README

Data and Code for: Gender Gaps in Entrepreneurship: Business Networks and Collaborations in Ghana

Monica Lambon-Quayefio, Edward Asiedu, Francesca Truffa, and Ashley Wong

Overview

The code in this replication package constructs the analysis file using Stata. Three main files run all the code to generate the data for the 2 figures and 3 tables in the paper. The replicator should expect the code to run for about 5-10 minutes.

Data Availability and Provenance Statements

Statement about Rights

- ☑ I certify that the author(s) of the manuscript have legitimate access to and permission to use the data used in this manuscript.
- ☑ I certify that the author(s) of the manuscript have documented permission to redistribute/publish the data contained within this replication package.

Summary of Availability

- ☑ All data **are** publicly available.

Details on each Data Source

Data.Name	Data.Files	Location	Provided	Citation
Survey of agribusinesses in Ghana	gender_gaps_ghana.dta	data/raw/	TRUE	Lambon-Quayefio et al. (2025)

Survey data

The survey data of agribusinesses in Ghana was collected by the authors on a sample of male and female entrepreneurs in the agribusiness sector in Ghana who have applied to or participated in a training program offered by the Ghana National Entrepreneurship Innovation Programme (NEIP). This data have been deposited in the AEA Data and Code repository (https://doi.org/10.3886/E228101V1). The data were collected by the authors, and are available under a Creative Commons Non-commercial license.

Computational requirements

Software Requirements

- ☑ The replication package contains one or more programs to install all dependencies and set up the necessary directory structure.
- Stata (code was last run with version 18)
  - `estout`
  - `coefplot`
- the program "`master.do`" will install all dependencies locally

Memory, Runtime, Storage Requirements

Summary

Approximate time needed to reproduce the analyses on a standard 2025 desktop machine:

- ☑ <10 minutes

Approximate storage space needed:

- ☑ < 25 MBytes

Instructions to Replicators

- To execute all analyses, simply run the `master.do` file, ensuring that the necessary paths are correctly set and the switches for clean and output are set to 1. Below is an overview of the functions of other code files in the folder:
  - `clean.do`: This file renames and generates dummy variables for the analysis. It also creates the index variables using `zindex.ado`. Lastly, it saves the cleaned do file under data/analysis as `gender_gaps_ghana_clean.dta`.
  - `output.do`: This file uses `gender_gaps_ghana_clean.dta` to create Tables 1,2 and 3 and Figure 1.

Instructions to Replicators

- Edit `code/master.do` to adjust the default path
- Run `code/master.do` to run all steps in sequence.
